

Epoxy and Type 2 Tape

While contract renewal negotiations with 3M are underway, projects on major divided highways are now to specify epoxy for all of the long line pavement markings (skips, and solid white storage lines, etc.). All intersection markings will continue to be Type 2 tape. This includes stop bars, arrows, railroad crossings, hash marks, etc.

For those jobs already let with the Type 2 tape as part of the contract, consult with Eileen Rackers, Mike Curtit or Jim Brocksmith on change ordering tape quantities.

Contact Eileen Rackers, Mike Curtit or Jim Brocksmith with any questions.
